Dear Mr. King:

Re: Request for Additional Copies of PAP Amendment, Modification to  
Temporary Screening Facility, Genwal Coal Company, Crandall  
Canyon Mine, ACT/015/032-87(C), Folder #2, Emery County, Utah

On January 28, 1988, the Division received your application concerning the above-referenced PAP Amendment for the Crandall Canyon Mine. Your application cannot be processed at this time. Sufficient copies of the plans must be received to transmit to other state and federal regulatory agencies for their comments and/or concurrence. This is required under our Cooperative Agreement with the Office of Surface Mining and the approved Utah Coal Regulatory Program. All coal operators were notified by registered letter, dated November 16, 1987, from Lowell P. Braxton (copy attached).

The Division will suspend technical review of this application until we receive eight complete copies of the proposed modification for appropriate distribution. For future reference, please provide eight (8) copies of all preliminary applications for permit changes and/or abatement plans. This will help prevent unnecessary delays in processing the proposal and hopefully keep any proposed construction schedule(s) on track.

We appreciate your cooperation and understanding in completing this permitting action.

Sincerely,

D. Wayne Hedberg  
Data Management Coordinator

RE: Modification to Temporary Screening Facility

Dear Mr. Braxton:

Genwal Coal Company has recently lost the services of Cleveland Coal Sales as a contractor for the production of stoker coal and reduction of oversize material. Due to the abrupt and unforeseen circumstances surrounding the Cleveland Coal Sales departure, we must have the ability to reduce coal size at the mine site. This reduction process is needed to allow us to continue to service our present contracts.

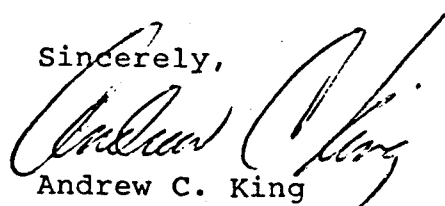

At this time Genwal Coal hereby requests approval for the addition of an enclosed crusher to our temporary screening system located at the mine.

The crusher will be enclosed to contain fugitive dust. Water sprays will be applied to the throat of the crusher in the event of fugitive dust emissions. The crusher will be fed by a chute from the screen and an additional belt will be placed below the crusher to carry away the crushed product.

We anticipate approximately 275 tons of material to be crushed per day. This temporary crusher will be removed in conjunction with the approval for the temporary screen.

If you should have any further questions, please feel free to contact me at 637-7383. Thank you for your time and consideration.

Sincerely,

Andrew C. King
